The T106-2 (red) toroid is L1 in the schematic diagram. The T68-6 (yellow) toroid is L2.. I used the enamel wire that I had on hand. The 24 gauge wire happened to allow me to nicely fit 40 turns on the T106 core (L1).I could have used larger size wire for the few turns required to get the required inductance for the higher bands on the smaller T68 toroid (L2) ... but I did not have any!

Simple Tuned HF Preselector - Ham Radio Secrets

I see it could be done by software controlled devices...my own preference is to use a hardware first as not every software is capable of providing all required setup options....much easier to do it on a hardware level. I got idea of now, just wonder why FlexRadio decided it this way that +80db over S9 is a sufficient number
