## **Cardiac Stress Testing What Is**

A cardiac stress test (also referred to as a cardiac diagnostic test, cardiopulmonary exercise test, or abbreviated CPX test) is a cardiological test that measures the heart's ability to respond to external stress in a controlled clinical environment. The stress response is induced by exercise or by intravenous pharmacological stimulation. Cardiac stress tests compare the coronary circulation ...

## **Cardiac stress test - Wikipedia**

Maximal stress testing involves increasing the intensity level until you can no longer keep up, either because you are winded or the ECG indicates this there is a cardiac problem. The goal of maximal testing is to provide evidence of CAD. The test can last from six to 15 minutes, sometimes less, depending on your cardiovascular fitness level.
