## **MRI of Brain - HRF**

A Brief Overview of How CT and MRI Works. For both CT (left) and MRI (right) scans you will lie on a moving table and be put into a circular machine that looks like a big doughnut. The table will move your body into the doughnut hole. The scan will then be performed. You may or may not get IV contrast through an IV.

An MRI differs from a CAT scan (also called a CT scan or a computed axial tomography scan) because it does not use radiation. MRI scans are better for imaging water-containing tissue. An MRI can be better at detecting abnormalities of the spinal cord, bulging discs, small disc herniation's, pinched nerves and other soft tissue problems.
