The Hamiltonian is a function used to solve a problem of optimal control for a dynamical system.It can be understood as an instantaneous increment of the Lagrangian expression of the problem that is to be optimized over a certain time period. Inspired by, but distinct from, the Hamiltonian of classical mechanics, the Hamiltonian of optimal control theory was developed by Lev Pontryagin as part ...

Two broad self-regulation theories include social cognitive theory (Bandura, 1991) and control theory (Powers, 1978). Social cognitive theory grew out of social learning theories that included concepts of learning from experience (ie, associations derived from one's history of experiences) and from watching or listening to others.

Self-determination theory (SDT) is an empirically based theory of human motivation, development, and wellness. The theory focuses on types, rather than just amount, of motivation, paying particular attention to autonomous motivation, controlled motivation, and amotivation as predictors of performance, relational, and well-being outcomes. It also addresses the social conditions that enhance ...

Richard W. Pew, Sheldon Baron, in Information Processing in Motor Control and Learning, 1978 I Introduction. The spurt in theory development in motor performance and motor learning has produced largely qualitative theories. Such developments as Adams's closed-loop theory (1971) and Schmidt's schema theory (1975) provide verbal–analytic statements of the functional specifications of a system ...
