1. Both Excel and Access can be used to process data automatically, but Access is said to be more advantageous because it allows us to make various model files in a single Access file. 2. Excel: the formula that is created to display the result of calculations must be made as many as the number of rows of tables/columns that will be calculated. 3.

The Basics Behind Stock Valuation. All businesses have an intrinsic value, and this value is based on the extent of free cash flow they have available during their lifetime. Money generated in the future is worth less than it is in present time, therefore projected free cash flows have to be discounted at a rate that is deemed appropriate.. Most Stock Valuation methods work on the theory that ...
