LASIK surgery. During LASIK eye surgery, an eye surgeon creates a flap in the cornea (A) — the transparent, dome-shaped surface of the eye that accounts for a large part of the eye's bending or refracting power. Then the surgeon uses a laser (B) to reshape the cornea, which corrects the refraction problems in the eye (C).

I had lasik at this clinic August 2016 and I can not express the gratitude I have for the doctors and nurses there making me feel comfortable and at ease. I am very thorough and I actually did 5 consultations at various clinics and this one was the best, by far....I love waking up and being able to see the world as it should be!
