Oxygen therapy is the term we use for the clinical use of supplemental oxygen. It's indicated in patients with acute hypoxemia (PaO 2 less than 60 mm Hg or SaO 2 less than 90%) and those with symptoms of chronic hypoxemia or increased cardiopulmonary workload. Oxygen is also given to help with the removal of loculated air in the chest, as you would see with pneumothorax or pneumomediastinum.

Nursing made Incredibly Easy - Lippincott Home

Coronary Artery Disease welcomes reports of original research with a clinical emphasis, including observational studies, clinical trials, translational research, novel imaging, pharmacology and interventional approaches as well as advances in laboratory research that contribute to the understanding of coronary artery disease. Each issue of Coronary Artery Disease is divided into four areas of ...
