Addendum. Example 2, above, uses string concatenation to create a list of values separated by a comma. This is a simplistic way to explain the use of Aggregate which was the intention of this answer. However, if using this technique to actually create a large amount of comma separated data, it would be more appropriate to use a StringBuilder, and this is entirely compatible with Aggregate ...

YouTube, Vimeo and other video hosts make it easy to embed their players in your own website. However, Youtube, Vimeo and others don't provide responsive videos by default. In this short tutorial, we'll show you how to make YouTube, Vimeo and other videos responsive in your website, using just a few lines of CSS.

Add Responsive YouTube and Vimeo Videos to Any Website

The percentage explained depends on the order entered. If you specify a particular order, you can compute this trivially in R (e.g. via the `update` and `anova` functions, see below), but a different order of entry would yield potentially very different answers. [One possibility might be to average across all orders or something, but it would get unwieldy and might not be answering a
