The hand axe, made by chipping flint to form a wedge, in the hands of a human transforms force and movement of the tool into a transverse splitting forces and movement of the workpiece. The hand axe is the first example of a wedge, the oldest of the six classic simple machines, from which most machines are based. The second oldest simple machine was the inclined plane (ramp), which has been used ...

Hydraulic machines use liquid fluid power to perform work. Heavy construction vehicles are a common example. In this type of machine, hydraulic fluid is pumped to various hydraulic motors and hydraulic cylinders throughout the machine and becomes pressurized according to the resistance present. The fluid is controlled directly or automatically by control valves and distributed through hoses ...

Clinically, any disease that includes striatal DA deficiency or direct striatal damage may lead to “parkinsonism,” a syndrome characterized by tremor at rest, rigidity, slowness or absence of voluntary movement, postural instability, and freezing .PD is the most common cause of parkinsonism, accounting for ~80% of cases.

To achieve a mechanistic understanding of LRRK2, a multidomain protein kinase, we must understand how the conformational landscape is changed by specific mutations that cause LRRK2 to become a driver of Parkinson’s disease (PD). To meet this challenge, we used a construct, LRRK2RCKW, that lacks the N-terminal inhibitory domains. Both catalytic domains as well as full activity are retained in ...
