In order to give a computational methodology for the dynamic modeling and analysis of the planar multilink mechanism with multiple degrees of freedom and multiple clearances and master the dynamic characteristics of the planar multilink mechanism, the nonlinear dynamic models of the multclearance hybrid seven-bar mechanism under different clearance numbers, different clearance values, different clearance positions, and different driving velocities are established and analyzed.

In general, the dynamic models of GMA are usually classified into three types: namely, the linear magnetostriction model, the single-DOF vibration model and the continuum vibration model. The first one denotes an analysis method where the output of GMA is calculated by $\lambda \cdot l_0$, here λ denotes the magnetostriction of GMM and l_0 denotes the length of the material in its un-magnetized state [20].

For the dynamic analysis of a variable-speed process, Chaari et al. proposed a dynamic model of a planetary gear for variable speed process, by modulating the meshing stiffness in Lin and Parker's model with the mean angular velocity [7,8]. That is, the pulse density of the meshing stiffness wave varies with the mean angular velocity.
