The Modern Synthetic Theory of Evolution showed a number of changes as to how the evolution and the process of evolution are conceived. The theory gave a new definition of evolution as "the changes occurring in the allele frequencies within the populations, " which emphasizes the genetic basis of evolution.

Biology is the scientific study of life. It is a natural science with a broad scope but has several unifying themes that tie it together as a single, coherent field. For instance, all organisms are made up of cells that process hereditary information encoded in genes, which can be transmitted to future generations. Another major theme is evolution, which explains the unity and diversity of life.

Biology - Wikipedia

The modern synthesis was the early 20th-century synthesis reconciling Charles Darwin's theory of evolution and Gregor Mendel's ideas on heredity in a joint mathematical framework. Julian Huxley coined the term in his 1942 book, *Evolution: The Modern Synthesis*. The 19th-century ideas of natural selection and Mendelian genetics were put together with population genetics, early in the twentieth ...
