Basic Neurochemistry had its origin in the Conference on Neurochemistry Curriculum initiated and organized by R. Wayne Albers, Robert Katzman and George J. Siegel under the sponsorship of the National Institute for Neurological Diseases and Stroke, June 19 and 20, 1969, Bronx, New York. At this conference, a group of 30 neuroscientists constructed a syllabus outline delineating the scope of a ...

A wide range of neurological manifestations have been associated with the development of COVID-19 following SARS-CoV-2 infection. However, the etiology of the neurological symptomatology is still largely unexplored. Here, we used state-of-the-art multiplexed immunostaining of human brains (n = 6 COVID-19, median age = 69.5 years; n = 7 control, median age = 68 years) and demonstrated that ...

Amyotrophic lateral sclerosis (ALS), also known as motor neurone disease (MND) or Lou Gehrig's disease, is a neurodegenerative disease that results in the progressive loss of motor neurons that control voluntary muscles. ALS is the most common type of motor neuron disease. Early symptoms of ALS include stiff muscles, muscle twitches, and gradual increasing weakness and muscle wasting.

Microglia as a Sensor of Tissue Pathology. Activated microglia are found in a large number of pathological conditions and, due to their low threshold of activation, have been proposed as a sensitive marker of early tissue damage. This can be exploited in diagnostic neuropathology and neuroimaging.

Rates for these neurodegenerative illnesses are increasing steadily with the aging of the U.S. population, and it is thought that worsening symptoms can be blamed on the havoc inflammation wreaks on brain regions involved in thinking, memory, and movement, or, in the case of frontotemporal dementia, personality, behavior, and language.
