Low voltage (LV) variable frequency drives (VFDs) have been applied to applications up to 2500 horsepower (HP). Medium voltage (MV) VFDs have been applied to applications as low as 150 HP. Traditional power system design practice suggests that motor crossover from low voltage to medium voltage is in the 200-600HP range.

If the VFD system has bypass, there will be an overload device for the bypass circuit, but if tripped, will also prevent the VFD connect to the motor. Make sure if you have a bypass function that both the VFD and bypass mode operate the motor in the same direction. Test the VFD without a motor to possibly isolate a problem (V/Hz).
