Before After To be considered When the pawn reaches its final destination (i.e. position-10), the whole circuit becomes non- responsive. The dice stops rolling and displays 'E' or 'X' or any other way you choose to indicate the end of the game. At any time, when you hit on the Reset button, the pawn returns to its initial position, square 1.

By the way, the step where you multiply by $\frac{1}{x}$ needs more justification than just saying $\frac{1}{x}$ exists (and is $\neq 0$). Actually, if you are precise you have to write two equations exactly like in Arturo's answer there as well. It just happens that in this specific case, those two equations are equivalent and you can drop either of them without changing the solutions.
