What Are The Average Cst

In economics, average cost or unit cost is equal to total cost (TC) divided by the number of units of a good produced (the output Q): $=$. Average cost has strong implication to how firms will choose to price their commodities. Firms' sale of commodities of certain kind is strictly related to the size of the size of the certain market and how the rivals would choose to act.

anywhere from \$20 to \$25 with the average total hourly cash compensation of \$23.

Hourly wage for CST | Salary.com

I have come across a few posts talking about the CST score. Apparently a score of more than 45 is pretty amazing and a score of less than 35 puts you at the bottom. I personally think a score of 35 is pretty good. This just made me wonder what the average score would be. This will obviously be an estimate.

...

There are several ways to measure the costs of production, and some of these costs are related in interesting ways. For example, average cost (AC), also called average total cost, is the total cost divided by quantity produced; marginal cost (MC) is the incremental cost of the last unit produced.

The Relationship Between Average and Marginal Costs

The average cost is computed by dividing the total cost of goods available for sale by the total units available for sale. This gives a weighted-average unit cost that is applied to the units in the ending inventory. There are two commonly used average cost methods: Simple weighted-average cost method and perpetual weighted-average cost method.

Average cost method - Wikipedia

The OCT based macular thickness parameters, namely central subfield thickness (CST) and cube average thickness (CAT) have recently been identified, as bioimaging biomarkers for DME . CST is the preferred OCT measurement for the central macula because of its higher reproducibility and correlation with other measurements of the central macula .
